

Activity	Mitigation/Management Measures	Monitoring/record keeping
Control of air quality degradation	<p>Vehicles and machinery must be well tuned to minimize air emissions.</p> <p>Use vehicles with road worthiness seal.</p>	<p>Log records of last date of vehicles servicing.</p> <p>List of vehicles used and their road worthiness certificates.</p>
Noise	<p>All construction work and demolition work, except prefabrication works, must be carried out during day time to minimise nuisance to the local community and disturbances caused to nocturnal fauna that uses auditory communication.</p>	<p>Log of daily work hours</p>
Control of water contamination	<p>Dewatering applications and permits (if required)</p> <p>Oil, solid waste and hazardous waste should be handled carefully and transported in sealed containers.</p> <p>No oil or hazardous chemicals should be used or stored within the wetland boundary.</p> <p>All mechanical repairs and refuelling must be done outside the protected area boundary.</p> <p>All paints, lubricants, and other chemicals used on the prefabrication site should be stored in secure and bunded location.</p> <p>No waste shall be disposed or left behind at the wetland site.</p> <p>Littering and accidental disposal of construction wastes should be avoided at all sites.</p> <p>General waste should be stockpiled in one central area of the development site for easier management and monitoring.</p>	<p>Supervisor details should be provided.</p>

	Construction activities should be carried out under the supervision of an experienced person.	
Managing vegetation loss	<p>This project shall not remove any tree within the wetland boundary.</p> <p>All coconut palms must be replanted.</p> <p>When removing bush and grass care must be taken only to remove the required footprint.</p> <p>All remaining vegetation must be transported to the Addu Waste Management Centre. No green waste generated from this project shall be left or disposed within the wetland boundary.</p> <p>If possible, the bush plants may be replanted at a site of the Councils choosing. No plants should be planted within the wetland boundary.</p>	Log of vegetation removed and replanted.
Pollution Due to Waste	<p>Workers should use protective gear when removing waste.</p> <p>All trucks used in the transportation must ensure that waste do not fall out of the truck during transportation.</p> <p>Waste must be segregated before transporting to the waste site. Segregation should consider separating, plastics, metal, construction waste and general domestic waste. All waste must be taken to the Addu City Waste Management Centre.</p>	
Managing risks to health and safety of construction workers	<p>All project personnel should be required to wear:</p> <ul style="list-style-type: none"> ▪ Boots (Leather boots with safety toe) ▪ Hard hat (Resist penetration by objects, absorb shock/blow, water resistant and slow burning, ▪ Safety glasses ▪ Masks 	

	<ul style="list-style-type: none"> ▪ Gloves <p>The following safety equipment must be used as required:</p> <ul style="list-style-type: none"> ▪ Ear mufflers (if working in a high noise area) ▪ Protective chemical gloves (when handling any waste oil or chemicals) <ul style="list-style-type: none"> • During construction period, any visitors could enter the site with the approval of the project supervisor. Unauthorized visitors should not be permitted to the project site. • The working area of the site should be barricaded to prevent any trespassing into the area where the machineries are in constant work. • No open electrical connection should be kept at the site, all the switch boards, panels etc, should be covered and protected <p>Safety briefing should be given to all construction workers.</p>	
Supervision of project activities	Assign suitably experienced and qualified personnel to supervise the entire project and ensure that all activities are carried out with minimal adverse impact on the environment
