

MACROECONOMIC UPDATE

October 2025

The Macroeconomic Update offers an overview of the latest macroeconomic projections for the Maldives

The Macroeconomic Update offers an overview of the latest macroeconomic projections for the Maldives economy. These projections are updated twice a year, in May/June for the fiscal strategy and in September/October for the national budget. This publication provides macroeconomic projections, which are based on data from various sources, including the Ministry of Finance and Planning, Maldives Monetary Authority, Maldives Inland Revenue Authority, Maldives Customs Service, Ministry of Tourism and Environment, Maldives Bureau of Statistics, and the International Monetary Fund. All figures presented in this report are based on data as of August 31, 2025.

1. Tourism Indicators

1.1. Tourism Developments

Over the past five years, the Maldives has witnessed a significantly high growth rate in its tourism industry with the economic recovery from the pandemic outbreak. In 2024, a milestone of 2 million tourist arrivals was achieved, and by the first eight months of 2025, tourist arrivals reached 1.5 million, representing a growth of 9.4 percent, compared to the corresponding period in 2024. This reflects not only the return of key source markets such as Europe, China, and India, but also structural factors like improved air connectivity and the gradual increase in accommodation capacity.

When assessing individual markets in the first eight months of 2025, the shares have remained similar compared to 2024. China has continued to be the largest segment of the arrivals market during the year constituting 15.9 percent of total arrivals with most arrivals, with a growth of 19.6 percent compared to the corresponding period in 2024. European markets follow closely behind China, making up the remaining top five tourist markets in the first quarter. Moreover, the Indian market has also shown a growth of 4.7 percent and stabilized as the sixth largest market. The United States and Australia have also emerged as strong markets outside of the European and Asian markets.

Total bed nights, representing the cumulative number of nights spent by tourists across all accommodation types, serve as a key measure of tourism activity in the Maldives. With the recovery from the pandemic, bed nights have shown a clear upward trend, largely driven by the growth in tourist arrivals. Total bed nights reached 13.2 million in 2024, marking a growth of 7.6 percent compared to 2023. Moreover, total bed nights have increased by 6.6 percent during the eight seven months of 2025, compared to the corresponding period in 2024. Notably, with the change in the

market composition, the average duration of stay has been dampening towards the pre-pandemic average.

The distribution of bed nights by accommodation type continues to be heavily concentrated in resorts, which remain the backbone of the Maldivian tourism industry. Resorts have consistently accounted for 85 to 89 percent of total bed nights in recent years, with the remainder attributed to guesthouses, hotels, and tourist vessels.

In line with total bed nights, resort bed nights grew by 7.8 percent while other bed nights increased by 6.1 percent in 2024. Resort bed nights have continued to grow by 7.6 percent during the first eight months of the year, while growth in other accommodation types have decelerated to 0.7 percent.

1.2. Tourism Outlook

Following the strong performance in the first eight months of the year, tourist arrivals are now projected to reach 2.2 million in 2025, representing a growth of 9.3 percent compared to 2024. Further, tourist arrivals are expected to grow by 8.8 percent to reach 2.4 million in 2026, supported by the full-year impact of Velana International Airport and upgrades to Hanimaadhoo International Airport during the year. Over the medium-term, growth in tourist arrivals is expected to stabilize at 7.7 percent.

In line with these projections, total bed nights are expected to reach 14.2 million in 2025, representing a growth of 7.7 percent. Moreover, total bed nights are projected to grow by 7.2 percent in 2026 and stabilize at a medium-term growth rate of 6.4 percent. Resort bed nights are also expected to follow a similar trajectory.

Although no significant distortion from global external shocks can be observed currently, an alternative scenario was constructed for 2026 and the medium-term to account for potential downside risks that may materialize due to the global uncertainties stemming from the global trade policy volatility, geopolitical tensions, and their implications on the global economic growth outlook. Under these assumptions, tourist arrivals are projected to grow by 8.0 percent in 2026, prior to stabilizing at a medium-term growth rate of 7.7 percent. Further, total bed nights are expected to increase by 6.5 percent in 2026, and medium-term growth is forecasted at 6.2 percent, with resort bed nights to follow a similar trajectory.

2. GDP

2.1. Real GDP

Following revisions to the national accounts statistics in September 2025, the real GDP (RGDP) for 2024 is now estimated at MVR 100,456.3 million, representing a growth rate of 3.5 percent compared to 2023. RGDP growth in 2024 was primarily driven by the expansion in tourism, and transport and communication, in addition to the sustained growth in public administration, health and education. However, a significant decline of 33.1 percent in the fisheries sector hindered the economic growth during the year. Notably, this represents a downward revision of 1.6 percentage points, to reflect the most recent data on fiscal developments, and transport and communication sector.

Looking ahead, RGDP for 2025 is projected to reach MVR 105,852.7 million, reflecting a growth rate of 5.4 percent compared to 2024. The outlook for tourism and tourism-related sectors has been revised upwards following a robust performance during the year, and these sectors are expected to drive economic growth in 2025. The growth projections for public administration, education and healthcare in addition to construction and real estate have been adjusted downwards, with the most recent fiscal developments. Nevertheless, the decline in these sectors has been offset by the revised expected growth in tourism and tourism-related sectors.

The strong trajectory of the tourism industry is expected to be further bolstered from the full operationalization of Velana International Airport and Hanimaadhoo International Airport. As such, RGDP is currently forecasted to reach MVR 111,463.7 million in 2026, representing a growth of 5.3 percent. In the medium-term, RGDP growth is expected to moderate and stabilize at an average annual growth rate of 4.7 percent.

Under the alternative scenario constructed to account for global uncertainties, RGDP is projected to grow at 4.8 percent in 2026, prior to stabilizing at an average growth rate of 4.7 percent in the medium-term.

2.1.1.Tourism

The real gross value addition (GVA) of the tourism sector is estimated to have reached MVR 22,557.6 million in 2024, marking an increase of 8.2 percent compared to 2023. This growth primarily reflects the increase in total tourist arrivals and resort bed nights during the year.

For 2025, GVA of the sector is projected to increase by 8.8 percent, reaching MVR 24,553.4 million. This represents a significant upward adjustment compared to the previous forecasts published in June 2025, driven by the upward revision of bed nights growth based on the strong performance recorded in the first seven months of the year. In particular, the increase in resort bed nights remains the key contributor to sectoral growth, given the substantially higher value-added from a resort bed

night compared to other accommodation types. Looking ahead to 2026, the GVA of the tourism industry is expected grow by 6.8 percent, supported by the full operationalization of Velana International Airport and the expansion of other international airports. Over the medium-term, GVA growth in the sector is projected to average 6.0 percent annually.

Under the alternative scenario, the tourism sector is projected to grow by 5.5 percent in 2026, followed by an average annual growth rate of 5.9 percent over the medium-term.

2.1.2. Construction and Real Estate

Despite a decline in imports of construction materials and the construction industry, the strong performance of the real estate industry contributed to overall sectoral growth of 2.8 percent in 2024. While shares of the two industries remain largely in line with previous estimates, overall sectoral growth was revised downwards by 1.4 percentage points based on most recent data.

Looking ahead, following the reprioritization and restructuring of the Public Sector Investment Program (PSIP), growth in the construction and real estate sector is projected to moderate to 0.6 percent in 2025, representing a significant downward revision from earlier forecasts. However, the sector is expected to rebound in 2026, with growth projected at 5.5 percent, before stabilizing at an average annual rate of 3.5 percent over the medium term, reflecting the revised outlook for PSIP implementation.

2.1.3. Other Sectors

The transportation and communication sector is estimated to have expanded by 7.2 percent in 2024, supported by the growth in tourist arrivals and bed nights during the year. The sector is projected to grow at 7.7 percent in 2025, in line with the strong performance in the tourism industry. Growth in the sector is expected to continue at 7.4 percent in 2026, prior to stabilizing at an average annual growth rate of 6.7 percent in the medium-term.

Under the alternative scenario, the GVA of the sector is projected to grow by 6.9 percent in 2026, followed by an average growth rate of 6.7 percent in the medium-term. The difference in growth rates between the baseline and alternative scenarios primarily reflects variations in projected growth of tourist arrivals.

In line with the continued expansion of the tourism industry, wholesale and retail trade sector is estimated to have grown by 4.2 percent in 2024, compared to 2023. The sectoral growth is projected to accelerate to 5.8 percent in 2025 and 5.3 percent in 2026, prior to stabilizing at an average growth rate of 5.2 percent over the medium-term. Under the alternative scenario, the sector is projected to grow by 5.1 percent in 2026, followed by a medium-term average growth rate of 5.2 percent.

Following revisions to the national accounts statistics for the year 2024, the public administration, health and education sector is now estimated to have expanded by 5.2 percent in 2024. Based on

recent fiscal developments, growth in this sector is projected at 3.4 percent in 2025 and 2.6 percent in 2026, prior to stabilizing at an average growth rate of 2.5 percent in the medium-term. The GVA of this sector remains unchanged between the baseline and alternative scenarios, as the performance of the sector is not directly influenced by developments in the tourism sector.

2.2. GDP Deflator

According to the latest release of the national accounts statistics, GDP deflator is estimated at 108.2 index points in the year 2024, reflecting a growth of 3.1 percent compared to the previous year. The GDP deflator is now projected to moderate to 1.6 percent in 2025 and 2026, before stabilizing at an average annual growth rate of 1.7 percent in the medium-term. Movements in the GDP deflator are largely influenced by developments in the tourism sector and changes in fiscal policy.

2.3. Nominal GDP

Nominal GDP is estimated to have reached MVR 108,672.5 million in 2024, reflecting a growth of 6.7 percent compared to 2023. Consistent with the projected trajectory of the tourism industry, nominal GDP is forecasted to increase by 7.1 percent in 2025 and 7.0 percent in 2026, before stabilizing at an average annual growth rate of 6.4 percent over the medium term. This outlook reflects the expected economic impact of the expansion of Velana International Airport and the development of other international airports.

Under the alternative scenario, nominal GDP growth is projected at 6.5 percent in 2026, with an average annual growth rate of 6.4 percent over the medium-term. This reflects the impact of a weaker tourism outlook arising from heightened global economic uncertainties.
